PROFILE

As a game developer with over 10 years of experience in writing code for gameplay, network, and user interface, I empower teams to ship AAA titles. I work closely with designers, combining my creative and technical intuition to turn their ideas into playable experiences. I am proficient at operating in industry-standard software such as Unreal Engine, Perforce, Github, Blender, and Jenkins. Utilizing Blueprint visual scripting and programming languages including C++, C#, Python, Javascript, and Java, I create tools to streamline development and automate processes, increasing efficiency across departments.

EXPERIENCE

Disbelief | Programmer 4 ***April 2021 - Present***

- Undisclosed Title (2025-2026):
  - Integrated and refactored the PCGEx Unreal Engine plugin to build a foundational framework for the Design and Tech Art departments
  - Created interactive procedural-generation tools for environmental level designers, empowering them to create distinct biomes from reusable parts, such as shared 3D models and textures
  - Authored code to support destructible environment objects in an 80-player game lobby, which reduced server overhead costs
- Thick as Thieves (2021-2025):
  - Interfaced with Design and Engineering teams to transform concepts into playable, networked gameplay mechanics using the Gameplay Ability System (GAS)
  - Utilized competitive analysis when building gameplay systems such as melee combat, powered electrical systems, stealing loot, and other various elements
  - Implemented scalable user interfaces from design mockups and developed reusable components to expedite future UI requests, which increased efficiency and saved time across multiple teams
  - Collaborated with designers to quickly prototype features, proving the fun before scaling to a full-fledged system
- Undisclosed Disbelief Projects:
  - Prototyped interactive experiences from concept to pitch in a matter of weeks, working closely with design to sell their vision
  - Devised robust solutions to complex technical problems to quickly propel the project in the right direction
  - Prioritized client's wants and needs when refining the user experience
  - Implemented PS5 and Xbox Series console support on an in-house game engine, enabling controller support and automated packaged builds

Gossamer Games | Unity Developer ***December 2020 - March 2021***

- Code Tycoon (2021):
  - Coordinated with the Narrative team to implementation dynamic scripted events, ensuring no playthrough is the same
  - Restructured the character customization system to support seamless integration of new cosmetic items (i.e hair, eyes, clothing), allowing users to represent themselves
  - Spearheaded development of mini-games like Pong and Bongo Time, providing valuable pacing to the gameplay experience

Night Kitchen Interactive | Unity Developer ***September 2018 - March 2019***

- Lost & Founders
  - Developed UI and map functionality for a location-based AR app, to more effectively engage users with historical figures in their area
- Xfinity Training
  - Created Xfinity augmented reality (AR) app used to train Comcast technicians, leveraging mixed-reality interaction for more effective training results
  - Established and documented iOS build pipeline to greatly expedite builds for other developers in the Apple ecosystem
- Company Operations
  - Installed an augmented-reality sandbox exhibit, utilizing an Xbox Kinect camera and a projector to detect sand depth + hand movement and display water flowing accordingly

EDUCATION

Drexel University ***2015-2020***

- Bachelor’s in Computer Science (3.14 GPA) | Concentration in Game Development and AI
